PHP:

An anagram is a word that can be formed by rearranging the letters from another word using all the letters exactly once. For example, silent is an anagram of listen, because it uses the same letters, just in a different order. Write a function is_anagram(A, B) that returns true if A is an anagram of B, and false otherwise.

JavaScript:

Write a simple function (less than 160 characters) that returns a boolean indicating whether or not a string is a palindrome.

Palindrome: a word, phrase, number, or other sequence of symbols or elements, whose meaning may be interpreted the same way in either forward or reverse direction. Famous examples include "Amore, Roma", "A man, a plan, a canal: Panama" and "No 'x' in 'Nixon'".

MySql:

1. Да се намерят всичко поръчки (order_id) и тяхната сума (order_sum) които съдържат продукт (model_id = 201), подредени по сума възходящо

2. Да се намерят всички модели (model_id , brand_name, product_name) на продукт product_id = 201 подредени по азбучен ред и цена.
